OCCUPATIONAL HEALTH AND SAFETY POLICY

UNION PETROCHEMICAL PUBLIC COMPANY LIMITED

OCCUPATIONAL HEALTH AND SAFETY POLICY

Objectives

The Company recognizes that occupational health, safety and the working environment are essential to its petrochemical business. The Company's operations involve chemicals, flammable materials, machinery, equipment, production processes, storage and product handling, all of which may pose risks to employees, contractors, communities, property and the environment.

The Company is committed to conducting its business with a focus on preventing accidents, injuries and work-related illnesses, as well as preventing and controlling incidents involving hazardous chemicals, spills, fires, explosions and other emergencies. The Company shall strictly comply with applicable occupational health and safety laws, standards and requirements.

This Policy establishes a consistent framework for managing occupational health and safety throughout the organization and supports continuous and sustainable improvement.

Scope and Guidelines

1. Compliance with Safety Laws and Standards

The Company shall develop and manage its occupational health and safety system in accordance with applicable laws, ministerial regulations, industry standards, government agency requirements and other requirements relevant to the petrochemical business. Compliance shall be reviewed regularly.

2. Assessment and Control of Work-Related Risks

The Company shall identify hazards, assess risks and establish appropriate control measures. These measures shall cover production processes, chemical storage and handling, the use of machinery and equipment, maintenance work and contractor activities, with the aim of keeping risks at an acceptable level.

3. Chemical and Hazardous Material Safety

The Company shall establish measures for the safe receipt, storage, use, movement and transportation of chemicals and hazardous materials. These measures shall include providing Safety Data Sheets (SDS), proper labeling and storage, and arrangements for responding to chemical spills and emergencies.

4. Prevention of Accidents, Fires and Emergencies

The Company shall provide fire prevention and suppression systems, alarm systems, emergency response and evacuation plans, and emergency equipment appropriate to the risks in each area. Plans shall be regularly reviewed and drills conducted to ensure a prompt and effective response.

5. Control of High-Risk Work

The Company shall establish controls for high-risk work, including hot work, confined-space work, work at height, electrical work, opening pipes or equipment containing chemicals, and maintenance work. A Permit to Work system and appropriate energy isolation measures shall be implemented.

6. Provision and Control of Personal Protective Equipment

The Company shall provide Personal Protective Equipment (PPE) appropriate to the work and associated risks, such as safety helmets, safety glasses, gloves, safety footwear, respiratory protective equipment and other necessary equipment. The Company shall ensure that PPE is used correctly.

7. Employee Health and the Working Environment

The Company shall arrange health examinations for employees based on occupational risk factors and monitor workplace conditions, including airborne chemicals, noise, heat, lighting and other risk factors, to prevent occupational illnesses and promote employee health.

8. Knowledge Development and Safety Culture

The Company shall continually promote occupational health and safety training and knowledge development for employees and contractors. It shall also promote awareness that safety is everyone's duty and responsibility within the organization.

9. Safety Management for Contractors and Related Parties

Contractors, service providers, transport operators and other external parties working on Company premises shall strictly comply with the Company's safety rules, regulations and standards. They shall receive appropriate safety briefings or training before starting work.

10. Reporting and Investigation of Accidents and Near Misses

The Company encourages employees and related parties to report accidents, abnormal events, unsafe conditions and near misses. The Company shall investigate their causes and establish corrective and preventive measures to prevent recurrence.

11. Emergency Preparedness and Response

The Company shall establish emergency response plans appropriate to the risks of the petrochemical business, including chemical spills, fires, explosions and other incidents that may affect personnel, communities or the environment. Responsibilities, communication channels and coordination with relevant external agencies shall be defined.

12. Monitoring, Inspection and Continuous Improvement

The Company shall set occupational health and safety objectives and indicators, monitor performance, conduct assessments and regularly review the effectiveness of its system. Findings from inspections, accidents, near misses and other recommendations shall be used to continually improve the system.

Responsibilities of Management and Employees

Managers at all levels shall provide leadership and serve as role models for safety. They shall support occupational health and safety activities with the necessary personnel, budget, tools and equipment.

All employees and workers shall comply with the Company's safety rules, regulations, work procedures and safety measures. They also have the right and duty to raise an alert or stop work when they identify a condition that may cause serious harm, in order to prevent loss of life, damage to property and harm to the environment.

This Policy is hereby announced for the information and compliance of all concerned.

This Policy shall take effect from November 15, 2025 onward.

Mr. Perapol Suwannaphasri

Managing Director
