UNION PETROCHEMICAL PUBLIC COMPANY LIMITED

CLIMATE CHANGE AND DECARBONIZATION POLICY

Union Petrochemical Public Company Limited (the "Company") recognizes that climate change poses significant risks to the economy, society, the environment, and business continuity. The Company is committed to systematically managing and reducing greenhouse gas emissions while improving the efficiency of energy, water, and resource use, adopting environmentally friendly technologies, and conducting business in accordance with low-carbon approaches. The Company also establishes targets, monitors progress, and transparently discloses its climate-related performance to support the transition to a low-carbon economy and achieve sustainable growth together with stakeholders across all sectors.

Implementation Guidelines

1. Greenhouse Gas Management

Prepare a greenhouse gas inventory and assess the Company's greenhouse gas emissions, covering Scope 1 and Scope 2, and consider extending the assessment to Scope 3 as appropriate, using recognized standards and methodologies.

2. Carbon Emission Reduction Targets

Establish short-, medium-, and long-term greenhouse gas emission reduction targets, including consideration of a net-zero greenhouse gas emissions target aligned with the nature of the Company's business and the national context.

3. Energy Efficiency

Promote efficient energy use in offices, warehouses, transportation systems, and operational processes, while supporting the adoption of energy-efficient machinery, equipment, and technologies.

4. Renewable Energy

Consider increasing the proportion of renewable energy used, such as solar energy, and procuring clean energy from reliable sources.

5. Low-Carbon Transportation

Improve transportation route efficiency, reduce empty vehicle trips, promote the use of energy-efficient or clean-energy vehicles, and encourage logistics partners to reduce greenhouse gas emissions.

6. Procurement and Supply Chain

Incorporate environmental and carbon-emission criteria into the selection and evaluation of suppliers, contractors, and business partners, while encouraging business partners to prepare greenhouse gas emissions data.

7. Low-Carbon Products and Services

Support the development or procurement of products with low environmental impacts that use raw materials efficiently, can be reused, and help reduce greenhouse gas emissions throughout their life cycle.

8. Climate Risk Management

Assess physical risks, such as flooding, drought, and high temperatures, as well as transition risks, such as laws, carbon taxes, technologies, and market behavior, and establish preventive measures and business continuity plans.

9. Carbon Offsetting

Prioritize the reduction of greenhouse gas emissions from direct operations and consider using high-quality, certified carbon credits for residual emissions that cannot yet be avoided.

10. Employee and Stakeholder Engagement

Promote knowledge, awareness, and participation among employees, and foster cooperation with customers, business partners, communities, and relevant organizations to drive greenhouse gas emission reductions.

11. Performance Monitoring and Disclosure

Establish performance indicators, monitor results, and transparently report verifiable information on greenhouse gas emissions, progress toward targets, and carbon reduction projects.

12. Compliance with Laws and Standards

Comply with applicable laws, requirements, and standards relating to energy, the environment, and climate change, and periodically review this policy.

This policy shall be observed by all directors, executives, employees, and persons acting on behalf of the Company. Management shall oversee its implementation, allocate resources, and review the appropriateness of the policy at least once a year or whenever significant changes occur.

This policy shall take effect from 1 May 2025 onwards.
